EDUCATION

Ph.D. in Chemical Engineering
University of Michigan

📅 Aug 2023   📍 Ann Arbor, MI

- Advisor: Professor Bryan R. Goldsmith.
- Dissertation title: "Heterogeneous Electrocatalysts for Aqueous Nitrate Reduction and Nitrogen Chemistry".
- Cumulative GPA: 4.00/4.00.
- 2018–2019 Fellow of the Michigan Institute for Computational Discovery and Engineering.
- 2022–2023 J. Robert Beyster Computational Innovation Graduate Fellow.
- Research themes: atomistic materials modeling, microkinetic reaction modeling, nitrate reduction, water purification, heterogeneous catalysis.

M.S. in Chemical Engineering
University of Michigan

📅 Dec 2020   📍 Ann Arbor, MI

- Cumulative GPA: 4.00/4.00.
- Three-time recipient of a research computing allocation from the National Energy Research Scientific Computing Center (NERSC), totaling 2.75M service units.

B.S. in Chemical Engineering
Cornell University

📅 May 2016   📍 Ithaca, NY

- Graduated *magna cum laude* (cumulative GPA: 3.86/4.00).
- John McMullen Scholar.
- Three-time recipient of a Semiconductor Research Corporation research grant.

SKILLS

- **Atomistic modeling**: LAMMPS, NequIP/Allegro, DeePMD-kit v2, Atomic Simulation Environment, Pymatgen, Vienna Ab Initio Simulation Package.
- **Programming**: Python, basic C++, Bash, PowerShell, Visual Basic for Applications (VBA).
- **High-throughput computing**: Slurm, Lmod, PBS/Torque, Fireworks, OpenMP.
- **Data science, machine learning**: Python (NumPy, SciPy, Matplotlib, Pandas, scitkit-learn, PyTorch), MATLAB.
- **Cloud computing**: Docker, docker-compose, Kubernetes, Rancher, Let's Encrypt.
- **Web development:** React, Vite, Django, Node.js, Tailwind CSS, PostCSS, SWR, react-chartjs-2, Rancher, Insomnia, Hoppscotch.
- **Databases**: MongoDB (PyMongo), PostgreSQL, JET SQL, Microsoft Access (VBA+DAO interface).
- **Linux distro familiarity**: SLES, CentOS/Rocky/RHEL (user); Ubuntu, OpenSUSE, Arch Linux (admin, daily driver).

RESEARCH EXPERIENCE

Distinguished Postdoctoral Fellow (Energy Sciences)
U.S. Army DEVCOM Army Research Laboratory

📅 2024–present   📍 Adelphi, MD

- Currently parameterizing equivariant, transformer-based graph neural network models to accelerate molecular dynamics (MD) simulations of Li and beyond-Li dense ionic liquid electrolytes, including Li–Zn–Cl and Li–Mn–Cl systems.
- Conducted a large-scale campaign of 6500 geometry relaxations to study adsorption of N-containing compounds to iron electrodes using the DFT-trained EquiformerV2 model, finding that such molecules may alter the surface-electrolyte interface in aqueous conditions and hamper charge transfer.
- Developed a Python library for rapidly designing, executing, and post-processing pipelines of hundreds of geometry relaxations or molecular dynamics calculations in VASP and CP2K, including directed acyclic graphs of tasks for each calculation.
- Authored a user guide on remote development using Visual Studio Code for the DoD High Performance Computing Modernization Project user community of approximately 4000 users across 8 Linux supercomputers.

Graduate Student, Postdoctoral Associate
University of Michigan

📅 2018–2024 📍 Ann Arbor, MI

- Conducted an exhaustive density functional theory study of over 900 simulations to understand nitrate reduction on Pt–Ru alloys. Found that alloys of approximate composition $Pt_{75}Ru_{25}$ best remove nitrate from polluted water sources.
- Developed a web app and graph database for 10–100 monthly active users to document complex metal alloy synthesis recipes, characterization data, and material properties that may ultimately power structure-property AI models for inverse alloy design.
- Studied the vacuum-phase stability and poison resistance of rhodium sulfide surfaces using DFT. Found that S-defected rhodium sulfide surfaces display partial resistance to chloride poisoning in water and identified $Rh_3S_4(100)$ as an active phase for nitrate reduction.
- Mentored 2 graduate students, 3 undergraduate students, and 1 master's student in density functional theory, machine learning, and materials informatics screening, leading to potential future collaboration on a computer vision model for predicting chemisorption of small organic molecules on metal alloys.

Visiting Graduate Student Scientist
Los Alamos National Laboratory

📅 2021 📍 Los Alamos, NM

- Conducted a DFT study of 295 perovskite oxynitride compounds to understand which factors influence the formability of these compounds, leading to a first-author article in ACS *Chemistry of Materials*.
- Published two first-author perspective articles in *Trends in Chemistry* and *Journal of Physical Chemistry C*, focusing on metal oxynitrides as tunable materials for electrocatalytic ammonia synthesis.

Chemical Engineer and Logistics Consultant
U.S. Army DEVCOM Chemical Biological Center

📅 2016–2018 📍 Edgewood, MD

- Synthesized and characterized the structure of PCN–222, UiO–66, and UiO–67 (MOF) catalysts identified for possible activity against chemical warfare agents. Characterized the kinetics of photocatalytic nerve agent simulant decomposition in the presence of PCN–222.

INDUSTRY EXPERIENCE

Chemical Engineer and Logistics Consultant
U.S. Army DEVCOM Chemical Biological Center

📅 2016–2018 📍 Edgewood, MD

- Developed a Microsoft Access database application to track progress of Army unit chemical detector equipment upgrades, including dependency resolution, rapid data input, and compliance reporting.
- Managed routine testing of 134 air compressors across 59 active-duty, Reserve, and National Guard Army units. Developed a Microsoft Access database application to track tests and produce compliance reports.
- Collaborated with the Japan Ministry of Defense to design and manufacture a new chemical detector, including attending 3 face-to-face conferences, coordinating two months of testing, and planning over 450 test trials.

DEPARTMENT AND COMMUNITY OUTREACH

Department Symposium Co-Chair, Graduate Student
University of Michigan

📅 2019–2024 📍 Ann Arbor, MI

- Served as a co-chair for the Chemical Engineering department-wide graduate symposium. The symposium showcases current students' work, leads to hiring opportunities, and strengthens the department's relationships with industry partners.
- Adjudicated an undergraduate poster session and provided feedback to help students improve their scientific communication skills.

Volunteer Science Fair Judge
U.S. Army Edgewood Chemical Biological Center

📅 2017 📍 Cecil County, MD

- Adjudicated 2 science fairs at Cecil County public schools. Provided feedback to 16 students to help raise interest in STEM fields.

TEACHING EXPERIENCE

Graduate Student Instructor
University of Michigan

📅 2019–2021   📍 Ann Arbor, MI

ChE 505 – Applied Mathematics for Chemical Engineering (Fall 2021):
- Served as a graduate student instructor for 32 students. Wrote 9 homework assignments, proctored and graded 2 exams, held weekly office hours, and designed and facilitated a semester capstone project.
- Developed grading standards and procedures to ensure fair grading across all students and assignments.

ENGR 1000-320 – Practical Data Science for Engineers (Fall 2020):
- Served as a graduate student instructor for a class of 44 students to help teach a data science course with an emphasis on machine learning. Responsibilities included facilitating laboratory exercises for 2 sections of 22 students each, holding weekly office hours, and grading homework.
- Created a Python framework to automate grading group assignments, including rapid data entry via Google Forms and integration with Canvas LMS, shortening our grading turnaround to 3 days instead of a week.

ChE 505 – Applied Mathematics for Chemical Engineering (Fall 2020):
- Served as a graduate student instructor for a class of 41 students. Composed 9 homework assignments, proctored and graded 2 exams, held biweekly office hours, and conducted one-on-one student mentoring.

ChE 496 – Advanced Special Topics in Chemical Engineering (March 2019):
- Helped teach a class of 12 undergraduate students a lecture about machine learning in March 2019. Developed a laboratory assignment and held office hours to help students practice basic machine learning.
